

Amendments to the Specification

Please replace the paragraph on page 10, starting at line 4 with the following rewritten paragraph.

Composite frame builder 506 constructs frames 516 according to logic flow diagram 600 (Figure 6). Processing according to logic flow diagram 600 is further illustrated in Figure 7.

Please replace the paragraph on page 12, starting at line 23 with the following rewritten paragraph.

Further reduction in the size of composite frame 710 is achieved as a result of using a single set of compression parameters in forming compressed frames 706. In particular, a compressed frame typically includes data representing at least some of the compression parameters used ~~[[for]]~~to compress the frame. By using the same compression parameters in forming compressed frames 706, those compression parameters can be represented only once within composite frame 710.
